## Positioning of Widgets

Here i started to use Custom Tkinter to position the widgets and this module also
allows me to have a cleaner and more modern GUI.

## Working on the Toplevel Settings Window

Im creating and testing whether i should have another window that pops up all for
settings,or should i create a menu option. Done though dates 28 December to 6 Jan

                01/03/2024
```

## MAIN Function

This was the main function where the program put words on the screen for the user to type and it picked up the keyboard detection of the word being typed. The only thing left to add is a timer, and an algorithm to find out the WPM and Accuracy.

(135093120+GauravS2507@users.noreply.github.com) | At
                02/03/2024
```

## Timer

Today i made a working timer that counts down from 60seconds and displays the WPM. I might add it so you can choose different time lengths.

                04/03/2024
```

## Adding different times, fixing restart button

Fixing the restart button so if disappears after its pressed. Made it so the entry can be used after time runs out. FIxed WPM for reach timed test 10, 30, 60

## Adding Scale Function

Added a UI Scale function as a part of accessibility features for users. The sizes are
.5, 1.0, 1.5

```

## Added End Program/ Removed Settings/ Updated Scale

I removed the settings window as it was inefficient and not logical. I added an end
program button so the user can leave the program. I updated the UI Scale

## Adding Keybinds to buttons

My last accessibility feature, adding keybinds to the main buttons:
- Begin
- Go Back
- Restart
- End Program

## Fixed Timer bug

This bug kept on ticking the timer down when the restart button was pressed. I had to update it. Works fine now
