Positioning of Widgets

Here i started to use Custom Tkinter to position the widgets and this module also
allows me to have a cleaner and more modern GUI.

MAIN Function

This was the main function where the program put words on the screen for the user to type and it picked up the keyboard detection of the word being typed. The only thing left to add is a timer, and an algorithm to find out the WPM and Accuracy.

Timer

Today i made a working timer that counts down from 60seconds and displays the WPM. I might add it so you can choose different time lengths.

Adding different times, fixing restart button

Fixing the restart button so if disappears after its pressed. Made it so the entry can be used after time runs out. FIxed WPM for reach timed test 10, 30, 60
